#### **\understanding Hydrocodone**

Hydrocodone is a prescription opioid used to relieve moderate to severe pain. It works by binding to opioid receptors in the brain and spinal cord, altering the perception of pain. Hydrocodone is commonly prescribed for:

• Post-surgical pain management

- Chronic pain conditions, such as arthritis or back pain
- Severe acute pain from injuries

When used responsibly under medical supervision, hydrocodone provides effective pain relief while allowing patients to maintain daily activities.
