What is Adderall?

[Adderall](#) is a prescription medication that combines two active ingredients: amphetamine and dextroamphetamine. It is primarily used to treat:

- **ADHD** (Attention Deficit Hyperactivity Disorder)
- **Narcolepsy** (a sleep disorder)

Adderall works by stimulating the central nervous system, improving focus, attention, and impulse control.

Forms and Dosages

Adderall is available in several formulations:

- **Immediate-Release Tablets:** 5mg, 10mg, or 20mg
- **Extended-Release Capsules (XR):** 10mg, 20mg, or 30mg

Dosage is prescribed based on individual needs and medical history.

How Adderall Works

Adderall increases levels of dopamine and norepinephrine in the brain, enhancing focus, mental alertness, and energy levels. For individuals with ADHD, it helps:

- Improve productivity
 - Enhance learning
 - Boost daily functioning
