## What is Phentermine

Phentermine is a prescription medication used primarily as a short-term weight loss aid in patients who are obese or overweight and have weight-related health conditions such as high blood pressure, diabetes, or high cholesterol. It is a sympathomimetic amine that works by suppressing appetite, likely through increasing the release of norepinephrine in the brain, helping reduce hunger and consequently caloric intake. Phentermine is commonly marketed under brand names such as Adipex-P and Lomaira and may be combined with topiramate for enhanced weight loss effects.

## XTRA PHARMACY

## Why Take Phentermine

Phentermine is prescribed to:

- Support weight loss efforts when diet and exercise alone have been insufficient.
- Reduce appetite and promote feelings of fullness.
- Help with weight maintenance after initial loss in conjunction with lifestyle changes.

It is important that Phentermine is used as part of a comprehensive weight management program, including dietary changes, exercise, and behavioral therapy.

## How Many Pills of Phentermine

Phentermine is available in various dosage forms, including 15 mg, 30 mg, and 37.5 mg oral capsules and 8 mg and 37.5 mg oral tablets. The typical dose is one capsule or tablet taken once daily, preferably before breakfast or 1-2 hours after breakfast, to avoid insomnia. The duration of treatment is generally limited to a few weeks (up to 12 weeks). The exact pill count depends on the individual prescription based on medical assessment.
