### What is Alprazolam?

**Alprazolam** is a prescription medication in the **benzodiazepine** class, commonly used to treat **anxiety and panic disorders**. It works by affecting chemicals in the brain that may be unbalanced in people who suffer from anxiety or panic. Alprazolam is effective at reducing anxiety symptoms, but it can be habit-forming if not used properly. Therefore, it should be taken only as prescribed and under the supervision of a healthcare provider.
