What is Oxycontin OP 10mg?

Oxycontin OP 10mg is an extended-release opioid analgesic designed to provide prolonged pain relief by releasing oxycodone steadily over time. It is used for patients requiring continuous around-the-clock pain management.

Uses of Oxycontin OP 10mg

- Management of chronic moderate to severe pain
- Postoperative pain control for extended periods
- Cancer-related pain management

Dosage and Administration

Oxycontin OP 10mg is typically prescribed to be taken every 12 hours with a full glass of water. Dosage adjustments depend on patient's pain severity, opioid tolerance, and physician guidance. Tablets must be swallowed whole and not crushed or chewed to maintain extended-release properties.

Oxycontin OP 10mg Dosage Summary

Patient Category	Typical Dose	Maximum Dose
Opioid-Naive Patients	10mg every 12 hours	Adjusted per doctor's evaluation
Opioid-Tolerant Patients	Dose individualized	Based on pain and tolerance levels

Chemist Premium Services: Key Benefits

Chemist premium platforms specialize in providing high-quality pharmaceuticals coupled with superior customer service and secure logistics.
