What is Hydromorphone?

Hydromorphone is a potent opioid medication primarily prescribed for managing severe pain that cannot be adequately controlled with non-opioid alternatives. Dosage options typically include **2mg, 4mg, and 8mg**, depending on the patient's pain level, tolerance, and medical history. Because of its strong analgesic effect, it must be taken under medical supervision.

Always follow the prescribed dosage and never exceed the recommended intake to prevent dependence or adverse effects.
