## What is OxyContin?

OxyContin (oxycodone hydrochloride) is a **prescription opioid** medication used to treat **severe, long-term pain**. It works by altering how the brain and nervous system respond to pain, helping to provide relief. Because of its high potential for dependence, abuse, and overdose, OxyContin is typically prescribed for patients with severe pain that requires around-the-clock, long-term management. It should only be used exactly as prescribed by a licensed healthcare provider.

## Why Choose Telehealth for Ordering OxyContin Online?
