What is Farmapram?

Farmapram is the brand name for Alprazolam, a benzodiazepine class medication that acts as a central nervous system (CNS) depressant. It enhances the effect of gamma-aminobutyric acid (GABA), a natural chemical in the brain responsible for calming neural activity. This results in reduced anxiety, muscle relaxation, and improved sleep.

Farmapram is available in multiple strengths, such as 0.25 mg, 0.5 mg, 1 mg, and 2 mg tablets, and is often used for generalized anxiety disorder (GAD), panic attacks, and short-term treatment of insomnia related to stress or tension.
