What is Alprazolam?

Alprazolam is a central nervous system depressant that works by enhancing the effect of gamma-aminobutyric acid (GABA), an inhibitory neurotransmitter that reduces overactive brain activity. This calming effect helps control anxiety, panic attacks, and hyperarousal. Alprazolam is classified as a Schedule IV controlled substance, meaning it has a legitimate medical purpose but requires careful medical supervision. Those looking to **order Alprazolam online** should ensure they use **licensed and verified online pharmacies** to prevent counterfeit or unsafe products.
